

IN THE CLAIMS

1. (Original) A processing system comprising a calculation unit (13), a storage device and a system for switching between the storage device and the calculation unit, said processing system being characterized in that:

- the storage device comprises several banks of registers (21, 22);
- the switching system comprises at least one switching device (24)

associated with each bank of registers;

- the calculation unit is able to communicate with at least two banks of registers by means of the associated switching devices.

2. (Original) A processing system as claimed in claim 1, characterized in that the calculation unit comprises at least one port and the switching system also comprises a common switching device (27) by means of which the port of the calculation unit can communicate with several registers.

3. (Currently amended) A processing system as claimed in ~~any one of claim 1 or 2~~claim 1, characterized in that:

- a bank of registers stores words of P/N bits, a data item to be communicated being comprised in one or more words, P and N being integral numbers, N being greater than or equal to 2 and P being a multiple of N ;

- the calculation unit communicates with i registers for reading or writing a data item of iP/N bits, i being an integer between 1 and N .

4. (Original) A processing system as claimed in claim 1, characterized in that the calculation unit comprises at least one port, said port being able to communicate with a single bank of registers.

5. (Original) A processing system as claimed in claim 4, characterized in that each bank of registers stores a data type and the port of the calculation unit is associated with a data type.

6. (Currently amended) An image reproduction processor comprising a processing system as claimed in ~~any one of claims 1 to 5~~claim 1.

7. (Original) A set-top box comprising at least one image reproduction processor as claimed in claim 6.

8. (Original) A device comprising at least one screen intended to display images and an image reproduction processor as claimed in claim 6.

9. (Original) A communication network comprising at least one transmitter able to send signals representing at least one image, a transmission network, a receiver able to receive said signals and an image reproduction processor as claimed in claim 6.
